## Wednesday Challenge Form

Group Members: Me, Evan, Jaden, Mason, and Elizabeth

Problem Statement: The problem this week was to make the closest triangle to 90 degrees.

Approach: We decided to just estimate the best we can and just tape the edges together.

Solution: We estimated to what looked like a 90 degree angle and then we just taped the corners

Lessons Learned: My lesson learned is to be more precise on the measurements and do the math not just estimate.
